Storm Drains - Keep them Clear

With the leaves off the trees, please be sure to monitor the storm drains on the streets near your home. Clogged storm drains can result in flooding of the street and possibly your yard, garage, or home. Use garden tools to scrape up sediment, leaves, sticks, and grass covering the storm drain grate and put them in a paper yard bag for disposal. Pushing leaves, sticks, and grass into storm drains can cause clogging in the stormwater pipes. Sediment and debris can be washed into local streams, Lake Roland, and eventually the Chesapeake Bay.

If a storm drain has too much debris for you to clean up, contact the Association at office@rrlraia.org and indicate the exact location, and we will contact the County.
